ADVANCE ORGANIZER

Applying AI in International Financial Management: Three Use Cases and One Test

GM 230 · IM 140 International Financial Management · Master Global Management and Master International Business

Hochschule Landshut
Faculty of Business
Business School
4 November 2026

1 The chain

Where a model can sit, and where it cannot

- **Plan.** Build the financial plan that every later step rests on.
- **Appraise.** Judge an investment with NPV, IRR and payback.
- **Finance.** Choose the right set of funding sources across borders.
- **Hedge.** Identify currency and interest rate exposure and cover it.
- **Value.** Appraise the company with DCF and multiples.
- **The rule.** A model may prepare any of these steps. It may not be the last one to touch the number.

2 Three use cases, three verdicts

Judged by output quality, not by technology

- **Statement analysis across jurisdictions.** USE WITH CONTROL Strong at normalising HGB, IFRS and local GAAP. Blind to what a standard never reports at all.
- **FX and interest rate risk.** NOT FOR FORECASTING No model beats the forward rate. But generating and stress testing scenarios works very well.
- **Valuation and comparables.** LONG LIST ONLY A peer group in minutes. Deciding which peers are truly comparable stays with you.

GUIDING QUESTION

A model can produce the number in seconds. The question is who can defend it in the meeting afterwards.

Our case: A mid-sized German exporter with subsidiaries in three currencies. One AI-generated valuation that looks perfect and is wrong in one consequential place.

Learning outcomes

By the end of this session you can …

- ✓ **locate** the points in the international finance chain where AI support is appropriate.
- ✓ **distinguish** forecasting from scenario generation and explain why the difference matters.
- ✓ **apply** a three-part test to any AI-produced financial result.
- ✓ **judge** whether a given output can be signed off, and say why not.
- ✓ **explain** why cross-border settings raise the bar for all three criteria.

! Your part today

Three outputs, three votes. Green card if you would sign it, red if you would not. We then build the test out of your own reasoning.

3 The one test

Three questions, asked in this order

- **Traceability.** Can you name the source of every input figure and show where it came from?
- **Reproducibility.** Would the same method produce the same result tomorrow, for someone else?
- **Accountability.** Is there a person who signs this, and who understands it well enough to defend it?
- **If one answer is missing** the result is not an analysis. It is an opinion with decimal places.

4 Why cross-border is harder

The same test, under worse conditions

- **Different standards.** HGB, IFRS and local GAAP report different things under the same label.
- **Different data quality.** Filing depth and audit requirements vary by country.
- **Different supervision.** In the EU, creditworthiness assessment of natural persons is classified as high risk. Corporate lending is not, so internal governance has to do the work.
- **Language is not neutral.** A translated accounting term can quietly change its meaning.
- **The scarce skill** is no longer producing the analysis. It is defending it.

Curricular position

Module handbook Master Global Management, WS 2025/26 and SS 2026. The module is identical to IM 140 in the Master International Business, first semester.

Semester 1
Foundations
GM 100 Scientific Writing · GM 110 Advanced Topics in Business Administration · GM 140 European and German Business Environment

Semester 2
International Financial Management
GM 230, 5 ECTS. Learning outcome: relate trends in digitalization and globalization to international financial management problem sets
THIS SESSION SITS HERE

Semester 2, parallel
Strategy and operations
GM 200 Business Environment and Strategy · GM 210 Global Operations · GM 260 Innovation Management

Semester 3
Decisions and control
GM 300 Managerial Decision Making · GM 340 Geoeconomics · GM 360 International Accounting and Management Control

Semester 4
Master thesis
GM 401 Business Research Methods · GM 403 Postgraduate Major Project

Dr. Christian Neusser · Teaching demonstration, appointment procedure W2 Business Administration, Financial Management and Corporate Finance
